Introduction

・ロト・「聞・ 《聞・ 《聞・ 《曰・

Concepts

Relational Structures

 A relational structure: a set of points, and a set of relations on these points.

- The ground set, A.
- A *k*-ary relation R a subset of A^k .

Concepts

Relational Structures

- A *k*-ary relation R a subset of A^k .

Concepts

Relational Structures

 A relational structure: a set of points, and a set of relations on these points.

- The ground set, A.
- A k-ary relation R a subset of A^k .

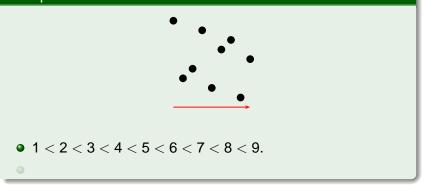

Permutations

• A permutation of length *n* is a structure on two linear relations.

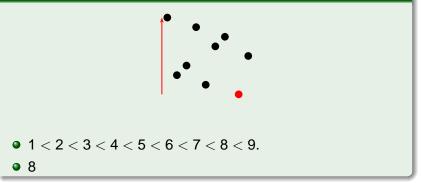

Permutations

• A permutation of length *n* is a structure on two linear relations.

Permutations

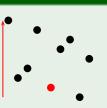

• A permutation of length *n* is a structure on two linear relations.

Permutations

• A permutation of length *n* is a structure on two linear relations.

Example

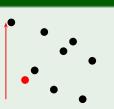

• 1 < 2 < 3 < 4 < 5 < 6 < 7 < 8 < 9.

8 ≺ 5

Permutations

• A permutation of length *n* is a structure on two linear relations.

Example

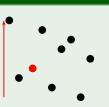

• 1 < 2 < 3 < 4 < 5 < 6 < 7 < 8 < 9.

8 ≺ 5 ≺ 2

Permutations

• A permutation of length *n* is a structure on two linear relations.

Example

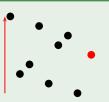

• 1 < 2 < 3 < 4 < 5 < 6 < 7 < 8 < 9.

8 ≺ 5 ≺ 2 ≺ 3

Permutations

• A permutation of length *n* is a structure on two linear relations.

Example

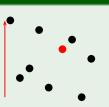

• 1 < 2 < 3 < 4 < 5 < 6 < 7 < 8 < 9.

• $8 \prec 5 \prec 2 \prec 3 \prec 9$

Permutations

• A permutation of length *n* is a structure on two linear relations.

Example

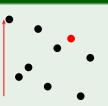

• 1 < 2 < 3 < 4 < 5 < 6 < 7 < 8 < 9.

• $8 \prec 5 \prec 2 \prec 3 \prec 9 \prec 6$

Permutations

• A permutation of length *n* is a structure on two linear relations.

Example

 $\bullet \ 1 < 2 < 3 < 4 < 5 < 6 < 7 < 8 < 9.$

 $\bullet \ 8 \prec 5 \prec 2 \prec 3 \prec 9 \prec 6 \prec 7$

Permutations

• A permutation of length *n* is a structure on two linear relations.

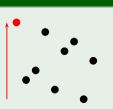

- 1 < 2 < 3 < 4 < 5 < 6 < 7 < 8 < 9.
- $8 \prec 5 \prec 2 \prec 3 \prec 9 \prec 6 \prec 7 \prec 4$

Permutations

• A permutation of length *n* is a structure on two linear relations.

Example

• 1 < 2 < 3 < 4 < 5 < 6 < 7 < 8 < 9.

 $\bullet \ 8 \prec 5 \prec 2 \prec 3 \prec 9 \prec 6 \prec 7 \prec 4 \prec 1$

Graphs

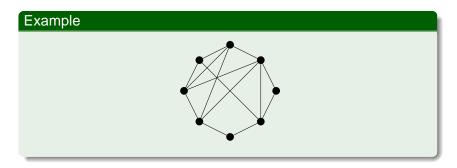

• A graph is a relational structure on a single binary symmetric relation.

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ●

Graphs

• A graph is a relational structure on a single binary symmetric relation.

◆□ ▶ ◆□ ▶ ◆三 ▶ ◆三 ▶ ● ○ ○ ○ ○

Posets

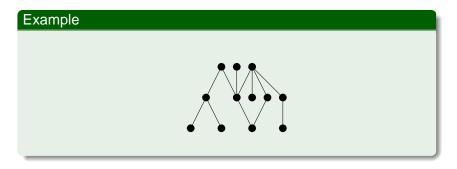

• A poset is a relational structure on a binary reflexive antisymmetric transitive relation.

Example

◆□ ▶ ◆□ ▶ ◆三 ▶ ◆三 ▶ ● ○ ○ ○ ○

Posets

• A poset is a relational structure on a binary reflexive antisymmetric transitive relation.

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □

Tournaments

• A tournament is a complete oriented graph.

- As a relational structure, it is a single trichotomous binary relation. (x → y, y → x or x = y.)
- A competition between players: $x \rightarrow y$ means "y wins."

Tournaments

- A tournament is a complete oriented graph.
- As a relational structure, it is a single trichotomous binary relation. (x → y, y → x or x = y.)
- A competition between players: x → y means "y wins."

Concepts

Intervals and Simplicity

Intervals and Simplicity

- An interval: set of points which "look" at every other point in the same way.
- Synonyms: Autonomous sets, blocks, bound sets, closed sets, clumps, convex sets, modules...

- A structure is simple if there are no proper intervals.
- Synonyms: Indecomposable, prime...

Concepts

- A structure is simple if there are no proper intervals.
- Synonyms: Indecomposable, prime...

Intervals

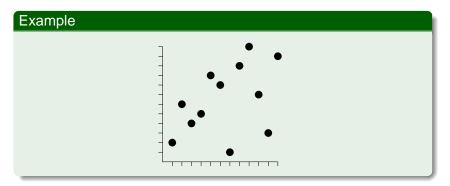

• Permutation π .

An interval of π is a set of contiguous indices *I* = [*a*, *b*] such that π(*I*) = {π(*i*) : *i* ∈ *I*} is also contiguous.

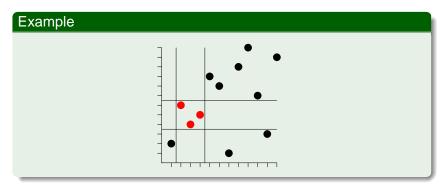

Intervals

- Permutation π .
- An interval of π is a set of contiguous indices *I* = [*a*, *b*] such that π(*I*) = {π(*i*) : *i* ∈ *I*} is also contiguous.

Compare and Contrast

Decomposing Permutations

• Every permutation has a block decomposition.

• Gives a unique simple permutation.

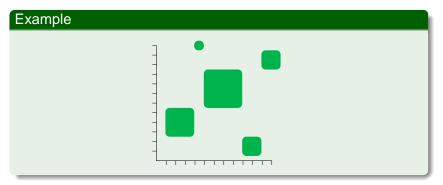

Decomposing Permutations

• Every permutation has a block decomposition.

• Gives a unique simple permutation.

Decomposing Permutations

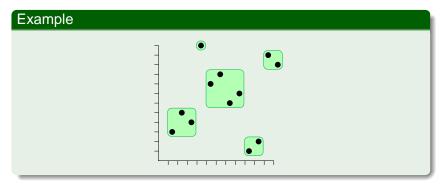

- Every permutation has a block decomposition.
- Gives a unique simple permutation.

Decomposing Permutations

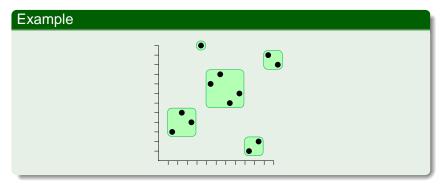

• If simple has > 2 points then the blocks are unique.

This is called the substitution decomposition.

Decomposing Permutations

- If simple has > 2 points then the blocks are unique.
- This is called the substitution decomposition.

Compare and Contrast

Similarities

Non-uniqueness

Block decomposition is not unique.

Compare and Contrast

Non-uniqueness

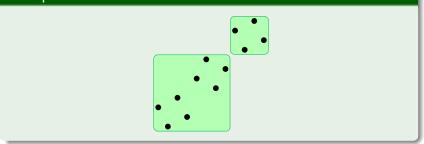

Block decomposition is not unique.

Compare and Contrast

Similarities

Non-uniqueness

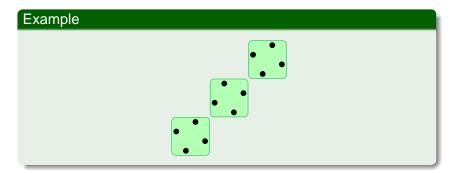

Block decomposition is not unique.

Similarities

Non-uniqueness

• Underlying structure is an increasing permutation.

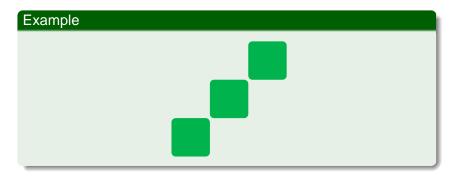

▲ロト▲聞ト▲国ト▲国ト 国 のQで

Similarities

Non-uniqueness

• Underlying structure is an increasing permutation.

▲□▶ ▲□▶ ▲三▶ ▲三▶ 三三 のへで

Similarities

Non-uniqueness

• Increasing permutation: both linear orders agree.

Example

▲□▶ ▲□▶ ▲三▶ ▲三▶ 三三 のへで

And in general...

• The substitution decomposition holds for every relational structure.

Non-unique cases arise in two ways:

- Degenerate all relations complete or empty.
- Linear binary relations "agree", others degenerate.

Graphs: degenerate only (complete or independent graph).

- Posets: linear (linear order).
- Tournaments: linear only (transitive tournaments).
